

Automate scheduling to maximise
your staff time and vehicle use

Better business, better care

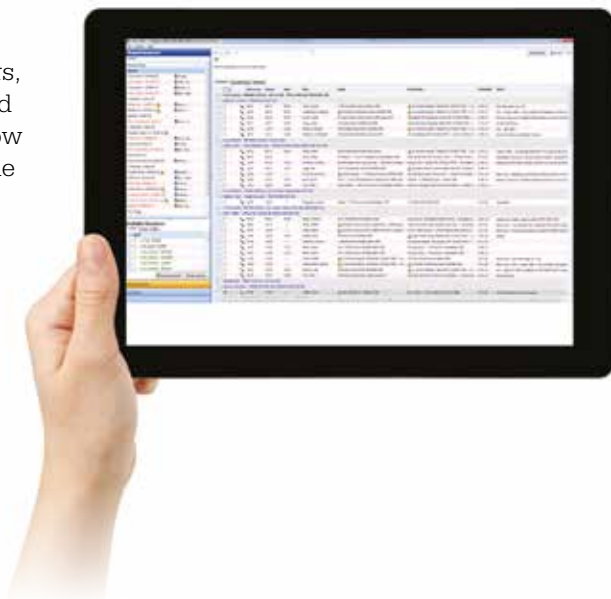

Making the most of every kilometre your worker and vehicle spend on the road better utilises highly skilled staff hours. But how well do you cope with last minute changes or when schedulers are on leave?

Our unique, world-leading software does all the scheduling and route planning for you, ensuring you maximise your workforce and minimise your mileage.

It develops detailed client profiles based on even the most complex individual requirements, then works out who is closest to the job and has the capacity to cater to client needs. At the same time it notifies drivers of all changes, guides them to locations and tells you at a glance where staff are, doing what job and when.

No matter if you employ drivers, volunteers or outsource to third parties, you will not believe how much easier it is to manage the logistics of your operation with Transit.

You can schedule in advance to reduce wasted travel time and costs. Transit will match worker skills to client needs, keep to promised visit and pickup times and prevent conflicts and over loading.

Personalise client profiles according to care needs

Whether you are dealing with wheelchairs, walkers, shopping carts, those who require front or back seat, or travel with a carer, our software can be personalised to suit the care needs of each person.

That way you keep on schedule while always putting the client first.

Automated scheduling to maximise vehicle use and visit times

With our unique, world-leading software you can automate the complicated task of working out who is closest to the job and has the capacity to deal with the particular needs of the client. Never waste travel time again.

Give your drivers everything they need

Transit's web-based GPS tracking plans routes for your drivers while the automatic notifications keep them up-to-date as jobs are changed or added.

Features checklist

- ✓ **Rapid scheduling to optimise vehicle use and worker hours**
- ✓ **Best routes plotted based on real road conditions**
- ✓ **Personalised client bookings based on care needs**
- ✓ **Intelligent GPS integration**
- ✓ **Manage bookings**
- ✓ **Optional SMS notifications to drivers for change in schedule**
- ✓ **eHealth and NDIS ready**
- ✓ **Manage multiple funds**
- ✓ **Ensure valid licenses for specialised vehicles**
- ✓ **Works for in-home services as well**
- ✓ **Reduce wasted time**
- ✓ **Advanced allocation tools**
- ✓ **Suits NDIS, HCP, private and public clients**
- ✓ **Ensure client care needs are matched to suitable workers and vehicles**

See staff at a glance

With Transit you can see who's busy, when and where. And you can prevent double booking with alerts for overlapping schedules.

Ensure client care needs are matched to suitable workers and vehicles.

Advanced algorithms to help maximise profits

With linked worker schedules and customer information channelled through one easy system you can avoid the time waste and potential errors of double handling of data. All HMS systems are fully integrated.

Tailor to fit all in-home services

More than just a vehicle management system, transit.hms adapts to optimise all your in home services so you can ensure your staff and resources are utilised as efficiently as possible.

Why HMS?

For over twenty years our market-leading software has been solving the real-world problems of health care businesses from major metropolitan health care networks, regional health care services to community transport providers and many more.

We analyse your current clinical practices and desired outcomes before suggesting the best package to suit your needs. We can then migrate your current data, train staff and provide ongoing support to answer any questions you have or deal with technical issues.

No matter if you are a community service provider or a large-scale, multi-site provider, we can tailor our system to fit.
